No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 21

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2, Application US/08474038

Sequence 2, Application US/08474038

Pareant No. 5673943

GENERAL INFORMATION:
APPLICANT: Donovan, William P.
APPLICANT: Jan, Yubing
APPLICANT: Jan, Yubing
APPLICANT: Gonzalez Jr., Jose M.
TITLE OF INVENTION: BACILLUS THURINGIENSIS cryET4 AND cryET5

TITLE OF INVENTION: TOXIN GENES AND PROTEINS TOXIC TO LEPIDOPTERAN INSECTS
NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
ADDRESSEE: Panitch Schwarze Jacobs & Nadel c/o A.S.
ADDRESSEE: Nadel
STREET: 1601 Market Street, 36th Floor
                      Sequence 2, Application US/08176865

Patent No. 5615319

ORGANISM: SOLUTION CONCERNIAL SOLUTION CONCERNISM: R26-21 MR1-37, subsp. aizawai 7.29
INDIVIDUAL ISOLATE: not applicable
TISSUE TYPE: not applicable
TISSUE TYPE: unicellular organism
TWEDIATE SOURCE: strains K26-21, MR1-37, subsp. aizawai
TWEDIATE SOURCE: 7.29
INMEDIATE SOURCE: 7.29
INMEDIATE: not applicable
POSITION IN GENOME: not applicable
CHROMOSOME/SEGMENT: not applicable
MAP POSITION: not applicable
NAME/KEX: solution in a proprietable
NAME/KEX: solution in a proprietable
NAME/KEX: relevant residues from 1 to 630
INCATION METHOD: by experiment
INCATION METHOD: by experiment
OTHER INFORMATION: genus confers Spodoptera resistance being expressed in trans

Patent No. 6562946
STREAT INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER TITLE OF INVENTION: BAUMANNI FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPRESENCE: GT-09-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NO 8203
LENGTH: 773
OTHER INFORMATION: plants

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Bacillus thuringiensis cryet4 and cryet5 toxin genes and proteins toxic to lepidopteran insects."
Patent number US5322667, 21-UWN.19
- I- FUNCTION: Promotes colloidosmotic lysis by binding to the midgut epithelial cells of many lepidopteran larvae.
- I- DEVELOPMENTAL STAGE: The cryetal protein is produced during sporulation and is accumulated both as an inclusion and as part of
                                                                                                                                                                                                                                                                                                                                        30-MAY-2000 (Rel. 39, Created)

-!- CATALYTIC ACTIVITY: dTTP + alpha-D-glucose 1-phosphate = diphosphate + dTDP-glucose.

-!- CATALYTIC ACTIVITY: dTTP + alpha-D-glucose 1-phosphate = diphosphate + dTDP-glucose.

-!- SIMILARITY: Belongs to the glucose-1-phosphate thymidylyltransferase a. . .; IEA.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
